

QUICK START · IPAD

BFM Debrief Tool

A 3D recreation of your engagement, built from ForeFlight track logs. Watch the merge, scrub the timeline, and study range & closure — right on your iPad.

Version **0.1** · Runs entirely on the device — nothing is uploaded.

Questions or updated versions: **[your name / contact]**

1 Install Microsoft Edge (one time)

The tool is a single web page. iPad won't run it in Safari from a file, but Microsoft Edge will.

- Open your company app catalog (the managed app/"Company Portal" icon).
- Find **Microsoft Edge** and install it.

SCREENSHOT 01

 Screenshot 01 — Microsoft Edge shown in the company app catalog, ready to install

The company catalog with Microsoft Edge available to install.

Why Edge? It's the one approved app that can both open the local file *and* let you pick your KML files. You only install it once.

2 Get the tool file

You'll receive a single file named like `bfm-debrief-v0.1.html`.

- Open the message/share I sent and **save the file to your iPad** (Files app).
- The version number is in the filename — newer versions will be `v0.2`, `v0.3`, etc.

SCREENSHOT 02

 Screenshot 02 — saving the bfm-debrief file to the Files app

Saving `bfm-debrief-v0.1.html` to Files. [capture however you'll actually send it — email / Teams / shared drive]

3

Open it in Edge

From the Files app, hand the file to Edge.

1. In **Files**, press and hold `bfm-debrief-v0.1.html`.
2. Tap **Share**.
3. Choose **Microsoft Edge** (tap **More** first if you don't see it).

Confirm these taps: this is the one device-specific step — please verify the exact path you used so it's 100% right for everyone.

SCREENSHOTS 03–04

 Screenshot 03 — the iOS Share sheet with Microsoft Edge as an option

The Share sheet — choose Microsoft Edge.

 Screenshot 04 — the tool's start screen open in Edge

The tool's start screen, now open in Edge.

4

Try the demo first

See how it works before loading your own logs.

- On the start screen, tap ► **View demo flight**.
- The 3D replay loads, paused. Tap **PLAY** at the bottom to roll it.

SCREENSHOT 05

 Screenshot 05 — the 3D replay running with the demo data

The replay view with the demo engagement.

5

Load your own flight

Export each aircraft's track log from ForeFlight as **KML**, then add them one at a time.

1. In the **Fighter** card (blue by default), optionally rename it or tap a different color, then tap **Choose KML file** and pick that jet's **.kml**.
2. Do the same in the **Bandit** card (orange). Its file **can be in a different folder** — you pick each one separately.
3. Tap **Build replay**.

Tip: the names and colors you set here label the two jets throughout the replay — readouts, traces, and the timeline.

SCREENSHOTS 06–07

 Screenshot 06 — choosing KML files from the Files picker

Choosing your KML exports from Files.

 Screenshot 07 — the replay built from the user's own KML files

Your own engagement, loaded.

6

Getting around the replay

Everything you need is in the top header and the bottom transport bar.

CONTROL	WHAT IT DOES
Drag on the 3D view	Orbit the camera. Pinch to zoom (or use the + / – buttons).
PLAY / timeline scrubber	Play, pause, and drag the playhead to any moment. Speed buttons: 1x–16x.
↪ Merge	Jump to the closest pass (the highlighted tick on the timeline).
☐ View ▼ (header)	Camera presets: God’s Eye, Chase J1/J2, Side, Free Orbit.
Curains · Range · Traces · Shadows · Grid	Display toggles in the header — tap to turn each on/off.
⊗ (header)	Trail length — how many seconds of each jet’s path stay drawn.
SLANT RANGE (top center)	Live distance and closure rate between the jets.
